

LEAN BODY[®] *for Her* CHALLENGE with *Kelsey Byers*

Sponsored by

LABRADA
NUTRITION

Eat Clean and Follow your Dreams!

Welcome to the Lean Body® for Her Challenge and the Kelsey Byers Program!

*Congratulations on taking the first steps to make a positive lifestyle change
by transforming your body and mind!*

A Message From Kelsey:

*"This program was designed to show you how to get in the best shape of your life and
experience a new found confidence. The most important thing to remember, this is not a
diet, it is a lifestyle change. Diets are temporary.*

*The steps you will take in this challenge will teach you to create healthy habits that you can
continue the rest of your life.*

*After gaining 50 pounds in college, I looked in the mirror and was so unhappy with the
person I saw looking back at me. I knew I needed a lifestyle change. I started lifting
weights and went out to eat less, avoiding alcohol at all costs. I did lose weight doing those
simple things, however, it wasn't until I hired a nutritionist and started eating clean meals
every three hours, that I saw a BIG change!*

*I am convinced that nutrition makes up 80% of what you look like, exercise making up the
other 20%. With that being said, make sure you understand that YOU control what food
you eat. In life, that is about the only thing we can control. Why not make it healthy?*

*I am walking proof that you can have the body of your dreams! In just three short months
of eating clean, I transformed my body. I know you can achieve the same great results!"*

-Kelsey Byers

The key to your success with this program is to make healthy lifestyle changes in small steps to achieve the end result you've envisioned. I recommend that you do this by eating 5-6 small frequent meals throughout the day and that you integrate a combination of cardiovascular and resistance training into your program. The important thing is that you enjoy the activities and changes so you'll stick with them in the long run.

Steps to enter:

- 1) Fill out your entry form on <http://www.labrada.com/kelsey-challenge> & Submit your short essay story and progress picture holding this week's newspaper.

The Challenge starts May 6, 2013, ending July 29, 2013.

2) Complete the 12-week challenge by following the nutrition and workout guidelines provided in the Kelsey Byers Challenge paperwork.

- 3) At the end of the 12 week period on July 29, 2013, you will submit your final transformation photo, holding that week's newspaper.

Your transformation will be judged and the entrant with the best transformation will win the Kelsey Byers Challenge.

Challenge Winner:

The entrant with the best transformation will win a free trip to Houston and two nights stay, sponsored by Labrada Nutrition. The challenge winner will spend the day with Kelsey Byers, training and celebrating your new exciting transformation! The Challenge winner will receive a bag of free Labrada product, visit the Labrada headquarters, and meet Lee Labrada, himself. The winner will also be recognized on the Labrada Nutrition website and social networks as "Athlete of the Month."

The Challenge winner will also receive a free photo shoot by an award winning photographer. The photo shoot will consist of three to four looks and 12 edited images.

Getting Started

There are two main reasons that people fail in their plans to get into shape.

Reason one: People simply start out with the wrong information.

Reason two: People lose motivation.

Once you have the right program and the right tools to help you stay motivated, the "get in

shape" equation is completed, and you can achieve your body shaping goals. Mind you, it won't happen without work, but if you have the right map and you are motivated to follow it through to its finish, YOU CAN get into great shape.

Now, I want you to listen to this carefully...

No matter what shape you are in now, you CAN improve your body, and by extension, your self image! And in many cases, you can improve so much that your family and friends won't believe your transformation.

This program works for the following reasons:

- It stimulates your metabolism while you reduce body fat
- You don't have to go hungry while on this program and you can eat clean the rest of your life

Before you get started, I recommend that you do the following:

- Take a “before” picture. This will demonstrate where you are at the beginning of your journey to obtain a more lean and healthy body. (Take one of the front, one of the back and one to the side. It also helps if you take your before pictures in a swimsuit so you can really see your progress when you take your “after” pictures at the end of the 12-week program.)

Trust me, my progress pictures have motivated me when nothing else will

- Set realistic, but specific goals for the 12 weeks
- Determine how you want to measure your personal success and stick with this system for the duration of the 12 weeks (i.e., dropping weight on the scale, losing dress or clothes sizes, losing inches on your tape measurements, or reducing body fat percentage by using fat calipers)

The Kelsey Byers Challenge program is designed to be a 12-week program. You will definitely see positive results within that timeframe if you stick with your program. Once you finish the 12 weeks and account for your success, you can keep the program going until you reach your goals. At that point, the program becomes a long-term maintenance program to keep you in shape for years to come. Remember - the goal isn't to get in shape just once...but to stay there. Don't think of it as a diet, it's a lifestyle change.

Kelsey as your COACH

One thing to keep in mind before you begin: I recommend that you eat about 5-6 small meals each day. This will consist of three main meals: a breakfast, lunch, and dinner, and two snacks or “mini” meals. It's very important that you keep your body fed on this program, so that you don't set yourself up to get hungry. By following this plan diligently for several weeks, you will be able to lose up to 2 – 3 *pounds of fat per week* while building lean muscle tissue.

Feel free to email kelseybyersfitness@hotmail.com with any questions or concerns regarding the challenge.

Success Factor One: The Right Information

You need to increase your metabolism before you can become a fat-burning machine, and stimulating muscle is the key. Muscle is very metabolically active tissue, which means that it burns a lot of calories even while you are at rest. Protein supports and builds muscle; therefore, consuming sufficient protein every day is extremely important.

Start with a protein source at every single meal.

Here are examples of protein sources - your 'Kelsey Byers Challenge Proteins':

Scrambled egg whites or egg substitutes, chicken breast, extra-lean beef, turkey breast, lean ground turkey breast, and fish (mahi and tilapia). You can also easily substitute *Lean Body for Her* meal replacement shakes for your "mini" meals. They are a great source of high quality protein.

Q: How much protein do I need at each meal?

A: A portion the size of the palm of your hand. One easy way to roughly measure out your protein serving size is to select a portion that is the size of the palm of your hand. For example, a typical chicken breast or piece of fish that is the size of your palm. Picture your hand without your fingers and thumb. It's that easy.

Sugar

Sugar can be detrimental to your success. Keep a sugar log and make it a point to keep your sugar intake under 35 grams per day, not counting sugar found naturally in fruits or vegetables.

Next, we address your carbohydrate needs.

Include complex carbohydrates with every meal. Most of your energy calories will come from "carbs." Contrary to popular belief, carbs are NOT your enemy.

Here are examples of carbohydrate sources - your 'Kelsey Byers Challenge Carbs': Oatmeal (avoid instant or sweetened oatmeals), cream of wheat, brown rice, baked potatoes, sweet potatoes (yams), beans, corn, peas, lentils, lima beans, barley, 100% whole grain breads and cereals, grits and corn tortillas. Fruits are also a complex carb.

Good Carbs (Complex)

Yams, Brown Rice, Corn, Baked Potato, Oatmeal, Lentils

100% Whole Wheat Breads, Grits, Fruit

Bad Carbs (Simple)

Pasta Chips & Crackers

French Fries White Bread

Refined Cereal Sugar/Candy

Flour Tortillas Pasteries/Baked Goods

Q: What should my carbohydrate intake be?

A: Eat a portion the size of your fist.

A good rule is to have a serving of carbs that is approximately the size of your fist with each meal. For example, a baked yam the size of your closed fist would be adequate for a meal.

Carbohydrate calories should not come from refined foods that are high in sugars.

This is one of the biggest mistakes that you can make. **Foods that should be avoided** are processed foods such as cake, pie, ice cream, and other sugar-laden foods. Now, carbs have gotten a bad reputation recently, but I would like to point out that carbs are good for you. They are necessary.

Can that be? Absolutely, but there is a distinct difference between "good" complex carbs and "bad" simple carbs. Simple carbs raise blood sugar levels quickly, converting to fat much more easily. As such, they should only be eaten sparingly. This chart highlights the difference:

The last component to your balanced meal is your vegetables.

Here are a few to choose from - your 'Lean Body Challenge Vegetables':

Lettuce, broccoli, green beans, spinach, asparagus, artichoke, peppers, tomatoes, cabbage, zucchini, cucumber, onions, cauliflower, carrots, squash, radishes, okra, bamboo shoots, brussel sprouts, celery, egg plant, leeks, shallots, sprouts, water chestnuts and mushrooms.

Q: What should my vegetable intake be?

A: Again, eat a portion the size of your fist.

Now to bring it all together: You should combine your Lean Body Challenge protein and carbs in roughly the same proportions at each "main" meal. Vegetables and salad are "free" – meaning you can have as much of them as you want, exceeding your "fist" size portion if you wish. But you shouldn't use any butter or condiments that are high in fat. For your two "mini" meals, you should include a protein shake and a piece of fruit (remember, I said you should eat about 5-6 meals each day consisting of a breakfast, lunch and dinner, plus two snacks or "mini" meals). If you wish to eat food for each of your meals, you can do that as well. Your body must be nourished throughout the day to keep your muscle tissue fed and to keep your metabolism burning calories efficiently.

A word about fruit: fibrous fruits like apples, strawberries, pears and melons are good ideas for your "mini-meals," but try to avoid more sugary fruits like bananas and citrus fruits.

Each "main" meal should consist of the following:

- Protein the size of your palm
- Complex carbohydrate the size of your fist
- A serving of vegetables the size of your fist

Each "mini" meal should consist of the following:

- A small protein shake with a fist-sized serving of fruit

OR

- A meal to match your other meals

A word about breakfast...

If time is a problem with preparation, breakfast can be as simple as a small bowl of instant oatmeal (add a cup of fruit on top and a Lean Body" Ready-to-Drink shake for extra protein).

If you have a little more time, try scrambled Egg Beaters or egg white veggie omelets with whole wheat toasted bread and low sugar jam. Breakfast fuels your body so that you experience more energy throughout the day. The word breakfast means just that: "to break fast." After a lengthy rest, which is to say 8 hours.

Balanced Meals are the key to **SUCCESS**

Kelsey Byers Challenge

Sleep

Speaking of sleep, your body wants to refuel itself for the activities of the coming day.

When you wake up, your heart rate accelerates, the metabolism gets stimulated, and you get hungry. A well-balanced program that consists of protein and complex carbohydrates with minimal fat is the key. **Studies show that people who eat breakfast have a higher level of energy in the mid-to-late afternoon and avoid the “energy crash” or feeling of sluggishness that is common for those who skip breakfast. Aim at getting 7- 8 hours of sleep per night. Eating breakfast also helps to stimulate and maintain your metabolism.**

A word about sodium: Avoid luncheon and deli meats and red meat, especially pork, because deli meats are extremely high in sodium. For example: two ounces of pork lunchmeat is equal to 570 milligrams of sodium. The recommended daily value of sodium is less than *2400 milligrams*. If you're going to have pork, opt for the pork tenderloin instead.

Watch Out for Saturated Fats...

Minimize and avoid the following whenever possible: cheese (use low fat or non fat cheese), butter (use a butter substitute), margarine, egg yolks, sour cream (use fat free), salad dressings (use fat-free Italian dressing or lemon juice instead), fries (try the fat-free baked fries), potato chips (try low fat, baked or fat free instead), ice cream (try nonfat ice cream, frozen yogurt or sorbet instead), mayonnaise (try fat free mayo), peanut butter, chocolate, desserts, and keep junk foods to occasional use.

How to Read Nutrition Labels:

Watch for hidden fats in packaged foods. Read the labels! Here is an easy formula to figure the percentage of fat in a labeled food: For every 100 calories, foods should contain 20 calories of fat or less, or 20% fat by calories. You can also take the listed fat calories per serving and divide by the total calories per serving. Avoid foods that are higher than 20% fat by calories.

Here are some “Kelsey Byers success tips” for you:

1. **Cook and store.** Once a week or twice a week, cook enough chicken breasts, vegetables and complex carbohydrates (rice, potatoes, yams, etc.) to last you throughout the week.

Bag the individual portions in small baggies and refrigerate or freeze them. This makes it very easy for you to select your daily meals from the refrigerator and throw them into your cooler, so you can conveniently eat them during the day. I find that having a cooler with me keeps me on schedule and makes it very convenient for me to eat quickly and efficiently, especially when I don't have a lot of time.

It only takes 10-15 minutes to eat. Everyone has a lunch break and a coffee break. With proper planning, this should punch a hole in your excuse of “I don't have time to eat!” Another simple solution is to cook enough dinner to have leftovers.

2. **Plan ahead.** This is essential if you're going to succeed. Take a few minutes the night before to determine what foods you will consume throughout the next day. If you're just starting out and don't have some of the food items that I recommend, don't panic. Just make yourself a short grocery list and pick up these items at your first available convenience. Your daily checklist can be a useful tool in planning the weekly grocery list for obvious reasons. Once you have carefully thought out the following day's food plan, lay out the necessary food items, so you can easily pack them in a cooler the following day.

3. **Pack a cooler.** Always pack a cooler with food and carry it with you to work. I store my lunch in a six-pack sized Igloo cooler. I always bring plenty of snacks to work – things that are easily transportable, such as: baked fish fillets and baked yams that I've cooked the night before, oatmeal, broiled chicken breasts, low-fat cottage cheese and fresh and frozen vegetables.

4. **When eating out, plan ahead.** Familiarize yourself with menus from various restaurants, and try to pick restaurants that serve menu items compatible with the Kelsey Byers Challenge program. This minimizes your risk of getting stuck making a bad food choice.

If you have your meal planned out before you arrive, the rest of the menu won't be as tempting. Also, ask to have your meat cooked without any butter or oil, say “no thanks” to the chips or bread while you wait. When ordering salad, ask for low-fat or no fat dressing and request for it to come on the side. A habit that I have gotten into is using my fork to add dressing to my salad versus dumping the bowl of dressing on the salad. This way I use less dressing and don't overdo it. I usually use two tablespoons of low fat or fat free salad dressing at a meal.

5. **Drink plenty of water.** Keeping your body hydrated and refreshed is very important, and water is the purest source of hydration you have. Water can also help suppress your appetite. If you never seem to get filled up when eating your meals, drinking more water will make you feel full faster. As a rule, I drink a gallon of water a day, 128 ounces. I keep

a gallon jug of water at my desk at work to keep me on track. You can also use a plastic water bottle to carry with you when you are on the go.

This is also a helpful way to track your water intake. I try to drink a gallon by 4:00 pm, everything extra is an added bonus. It may seem like a lot of water at first, so ease into it.

6. **Choose low fat foods.** Though there are scores of low-fat versions of many different kinds of packaged foods available today, many are still calorie-dense and full of artificial ingredients. Try to seek out foods that are naturally low in fat.

7. **Avoid sugary soft drinks and too much fruit juice.** Choose water and green tea instead. Believe it or not, this can make a big difference in your progress. For example, the average regular soda contains 39 grams of sugar! This gets transferred into fat very quickly in the body. Water, however, contains no sugar and no calories.

8. **Take a good multi-vitamin along with extra Vitamin E and Vitamin C.** Women should take extra calcium. There are a number of good wholesome vitamin brands on the market.

The Meal Plan at a Glance

Here's a sample breakdown of your meals. Eat 5-7 meals a day. These meals should be every 2.5- 3 hours.

***Note from Kelsey: "Nutrition determines 80% of what you look like, exercise making up 20%. Following your meal plan will determine your success in my program."*

1. Breakfast: 4-6 egg whites, 1 fist size serving complex carb (oatmeal, grits, or 2 slices of whole wheat toast,

OR: 1 piece of fruit, fat free skim milk or coffee with a Lean Body For Her Meal Replacement shake
2. Snack: Greek yogurt with fist-size portion of fresh fruit,

OR a Lean Body For Her Meal Replacement shake (either blended or Ready-to-Drink),

OR a small meal consisting of another protein and complex carb.
3. Lunch: Palm-sized portion of chicken, fist-sized complex carb, and veggies

4. Snack: Lean Body® For Her Meal Replacement Bar
OR 1 Cup low fat cottage cheese with fist-sized serving of fruit

OR have another small meal
5. Dinner: Palm-sized portion of chicken or fish, fist-sized complex carb, fist-sized, veggies and salad with fat free dressing
6. Snack: 4-6 scrambled egg whites, a fist sized amount of steamed vegetables

*Note from Kelsey: "I usually eat my last meal right before bedtime around 10:00pm. If you are eating clean all day, you should not gain weight by eating at night. If I am awake and it's been 3 hours, I eat. That simple."

It is realistic that you will want to snack. Here are some snack ideas for when your body is craving something (but be careful not to overdo it -moderation is the key): rice cakes, fat-free cheese or fat free cream cheese, fat-free yogurt, air-popped popcorn, and Lean Body shakes and protein bars.

Success means being **PREPARED!**

The Kelsey Byers Exercise Program

How long does it take to break or change a habit? Typically it takes 30 days to establish a new habit. Can you stick with a program for 30 short days?

1. Weight training should be the foundation of your exercise program.
 - It builds muscle, which helps you burn more fat and calories, even when your body is at rest
 - It stimulates and drives your metabolism
 - It shapes and curves the body, creating a more attractive and "lean" look
 - It increases your body's strength and endurance

2. Don't forget your cardio. The inclusion of cardiovascular exercise in your program will not only burn fat, increasing muscularity and leanness, but it will also result in increased energy levels and improved overall cardiovascular health.

During an intense workout, your body uses primarily muscle glycogen and carbohydrates as its energy source. But after the workout, it switches over to burning stored fat. Some studies have noted a 300% increase in fat burning after intense exercise! This demonstrates how you can change your metabolism with physical exercise. It also demonstrates that intense training -alternating weight training with cardiovascular exercise - really works. As a rule, I always start with weights and end with cardio. An alternative would be to do cardio first thing in the morning on an empty stomach for efficient fat burning.

Note from Kelsey: *"I typically perform cardio 3-4 days per week for about 30-40 minutes. You don't want to overdo cardio or you can burn muscle. You need muscle to stay lean and have muscle tone."*

The Workout

For the workout portion of the program, you will do 4-5 day routine that repeats itself. In order to stimulate your muscles and increase your metabolism, you will need to work various muscle groups. Your program will look like this:

Day 1 – Chest, calves and triceps (plus cardio)

Day 2 – Legs and glutes

Day 3 – Back and biceps (plus cardio)

Day 4 – Shoulders and abs (plus cardio)

Day 5 – Cardio and (optional) Legs and glutes

*Note from Kelsey: *"My glutes are my weakest area, so on certain weeks I like to train them twice. Ease into the program and see how you feel. If you feel motivated to get that fifth day in, go for it."*

Then repeat. I recommend that you integrate at least 30 - 45 minutes of cardio 3-4 times a week (walking uphill on a treadmill or outside, stairmill, elliptical, cycling, spinning, aerobics, etc.), in addition to the resistance training. See the above list for how to accomplish this. If you like, you can workout Monday and Tuesday, then rest Wednesday, resuming your workout Thursday and Friday. It all depends on your schedule and when you can fit it in.

Once you get started, it's not as hard or as time-consuming as it might seem at first. Perform the exercises listed on the chart found on the next page.

Note: We recommend that you consult a physician before beginning any new exercise program.

How to make every workout count

WEIGHT TRAINING: - When working out with weights, perform 4 sets of each exercise (a set is 8 - 12 repetitions of a single exercise - for this program, do 10 reps per set). Perform at least 2 different exercises or "stations" for each muscle group.

**Note from Kelsey: "I typically perform 3 or 4 sets of 8-12 on upper body and 4 sets of 15-20 on lower body exercises. You should be lifting heavy enough that the last set is a struggle. This is how you build lean muscle. You will not bulk up, but you will create a toned, shapely physique. I always lift as heavy as I can and keep a workout journal to track my weights. If I am able to do 4 sets of 12 on biceps curls, I will increase my weight on my next workout."

CARDIO: - Perform 30 - 45 minutes of cardio at a moderate pace. After a few weeks, try increasing endurance by adding periodic 2-minute high-intensity bursts. For example: Walk uphill for 45 min, performing a 40 second sprint every 10 minutes.

STRETCHING: - Don't forget to stretch before, after, and even during your workout. The important thing to accomplish is making sure your muscles are loose and warm before you begin working them. This helps prevent injury - especially for beginners.

RESTING: - Rest between sets only long enough to catch your breath. This allows the body to properly replenish its oxygen deficit. As a rule, I typically rest 30-60 seconds between sets.

The Workout Plan at a Glance

Exercise Summary

- During your resistance (weight) training sets, do 3-4 sets of 8-12 reps on upper body exercises and 4 sets of 15-20 reps on lower body for each exercise we have shown on the previous page.

- To determine what your beginning weight should be, start with a weight you think you'll be

comfortable with, and perform 1 set. The last three reps of that set should be difficult, but not

impossible. You should feel the muscle getting fatigued. If it's too easy, go up 5 to 10 pounds

until you find the appropriate weight. If it's too heavy, go down 5 to 10 pounds. You will get

stronger with time, so gradually increase the weight you lift as your program progresses.

- Rest long enough to catch your breath in between sets.

- Work in a 30-45 minute cardio session 3 – 4 times a week.

Success Factor Two: Motivation

If you will recall, I mentioned early on in this program that the two main reasons people fail are:

Reason one: People simply start out with the wrong information.

Reason two: People lose motivation.

Here are some of my favorite motivational techniques:

1. The Buddy System. Get a workout buddy or partner to help you stay accountable. Having a partner, you can encourage and push each other to reach the goals you've set.

2. Pictures. Pick out pictures of fit people and put them in places where you will see them constantly. Choose images of those who have physiques you aspire to, but who also have similar body types as you do. Create a FOCUS bulletin board in your office. Print out motivational quotes and pictures that keep you focused.

3. Keep a journal. It's important that you track your progress so that you keep going. A training journal is a good way to mark off your exercises as you do them. You can look back at them later and see what you've accomplished. This will help motivate you on days that you don't feel like working out. Likewise, a food journal is equally as helpful for tracking your diet.

4. Start a blog. This will help motivate you and hold you accountable. Once you make your goals public, it's amazing how much accountability it brings. Also, make your family and loved ones aware of your goals so they understand you are making a lifestyle change.

5. Small rewards. Every week you should reward yourself with what I call a "cheat meal." Note that I said cheat meal, not cheat day. The idea is that once a week you get to use one meal to eat anything you want. This way you won't feel as though you are depriving yourself. But be careful that you get right back on track, so that you don't set yourself back from all the progress you just made. Keep in mind that in the next week, you can look forward to another cheat meal.

6. Progress, not perfection. Many times when someone messes up on his or her diet or program, he or she will have the mentality that the entire program is blown. The

thought goes something like this, "Well, I just messed up, so I might as well eat whatever I want and start over next week." Keep in mind that your program is about progress, not perfection. You want to maintain a diet and program that can become lifestyle. Just get right back on track and keep going. You are only human.

7. Set specific goals and target dates. It is important that you not only set realistic goals for yourself, but that you also set a specific target date in which you want to have it accomplished. "I want to lose 30 pounds this year" is not specific enough. Try something like, "By June 30, I am going to lose 15 pounds and fit into a size 6 dress." Pull out your training journal and keep marking off the days you work out, write down what you eat, and keep visualizing your goal. You can expect to *lose 2 – 3 pounds per week safely*. Any more than that is not considered healthy.

8. Measure your progress. It's important to measure your progress as you go along to give yourself true and unbiased feedback. Measurement can be an incredible motivator because it cannot lie to you. When you notice that your waistline has reduced by a couple of inches, that is true measurement! When you notice that your body fat has decreased, that is true measurement! And when you notice that your physique looks more toned and sculpted based on your progress report (photography), that too is true measurement! And all can be motivating and help keep you on track.

A Word About Measurement

Measurement techniques include:

- Measuring body fat, using body fat calipers
- Weighing on a scale
- Using a tape measure
- Using photography by taking before and after photos
- Clothes becoming too big – having to "downsize"

All forms of measurement can be beneficial and true indicators of your progress. For the most accurate indication of your body composition, you may want to consider visiting a physician or nutritionist and having them give you a complete body composition analysis.

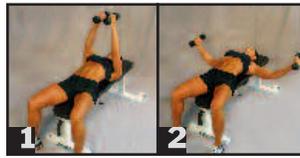

The Workout Plan at a Glance

The exercises listed here can be safely performed by both men and women. Remember not to lift more weight than is comfortable, but always lift enough weight to make your muscles have to work hard. Perform 5 sets of 10 reps for each of the 2 exercises pictured. After several weeks, try alternating other exercises (right).

ABS
LEGS
BICEPS
BACK
TRICEP
SHOUL
CHEST

Bench Press

Dumbbell Flys

Also Recommended for

CHEST:

- Incline Bench Press
- Incline Flys
- Pec-Deck
- Cable-Crossovers

Seated Dumbbell

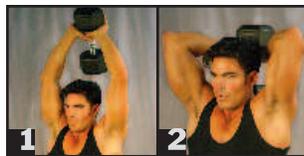

Side Lateral Flys

Also Recommended for

SHOULDERS:

- Seated Barbell (Military) Press
- Bent-over Side Raises

Overhead Tricep

Bench Dip

Also Recommended for

TRICEPS:

- Lying Tricep Extensions
- Close Grip Bench Press
- Standing Cable Pushdowns
- Dip Machine

Bent-Over

Lat Pull-downs

Also Recommended for

BACK:

- Assisted Pull-ups
- Wide Grip Pull-ups
- Deadlifts
- Shrugs

Hammer Curl

Standing Barbell Curl

Also Recommended for

BICEPS:

- Alternating Curls
- Concentration Curls
- Preacher Curls

Leg Press

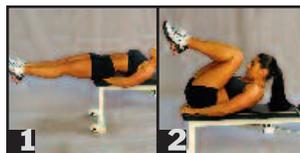

Leg Curl

Also Recommended for **LEGS:**

- Leg Extensions
- Straight Leg Deadlifts
- Seated/Standing Calf Raise
- Squats

Ab Crunch

Bench Leg Raise

Also Recommended for **ABS:**

- Reverse Crunches
- Standing Oblique Curls
- Hanging Leg Lifts
- Swiss Ball Crunches

A Word of Caution... If you are a relative newcomer to weight training or aren't 100% sure how to properly perform these exercises, visit your local gym and have a professional trainer show you the proper technique. This will help you avoid ineffective workouts, or worse...injury.

**A note from Kelsey: "Don't worry so much about the numbers on the scale. I weighed 140 pounds at 24% body fat and STILL weighed 140 pounds at 15% body fat. I encourage you to measure your body with a tape measure and judge your progress on how your clothes fit. Your goal is replace fat with muscle, so don't be too concerned with how much you weigh. It's more about how you feel and how the clothes fit. I never weigh myself unless I visit my nutritionist, which is once per month."*

When Motivation Fails: How to Avoid Pitfalls

So how do you deal with bumps in the road, and better yet, how do you avoid them in the first place when motivation fails you? Here are some suggestions:

- **Be true to yourself.** If you know you've messed up, acknowledge it and get back on track.
- **If you blow your diet, don't get desperate;** don't throw in the towel or continue to binge. Admit to yourself that what you are doing isn't conducive to achieving your goals, and cut your losses. Think of a car with a flat tire. You don't want to slash out the other three tires, just because you had one flat, do you? Slow down, think it through and "fix your flat." Get back on course.
- **Maintain stable blood sugar levels** by following the Kelsey Byers Challenge Exercise and Nutrition Program. Stabilizing blood sugar levels reduces food cravings. Reducing food cravings reduces the potential for "diet blowouts."
- **Schedule "cheat meals."** I'm not saying that pizza, ice cream, burgers and the like are good for you. What I'm saying is that if you feel the need to have these foods occasionally to maintain your sanity and stay in compliance with your program the rest of the time, plan them. Pick one day every week, and on that day have one meal where you consume a small portion of your favorite foods. Just don't overdo it! Again - moderation is the key, especially here.

- Remember that not feeling deprived is an important aspect of living a balanced lifestyle.

The perception that we can eat whatever we want, but are choosing to postpone its

consumption to a specific time of our choosing, is a lot better than thinking we can never have the desired foods that are “off limits.” If you consistently eat 5-6 meals each day, you are less likely to allow yourself to get hungry. Getting hungry makes it much more difficult to control what foods you eat. At the same time, if you are truly craving something bad, go ahead and have a little piece of it, but get right back on your program. Remind yourself that those foods and drinks will always be there. You owe it to yourself to see what your body can do NOW!

PROGRESS

A Final Word of Encouragement

Remember, this program is all about progress, not perfection.

The goal is for you to make gradual lifestyle changes that will help you get into better physical shape and health. Day by day, week-by-week, one “step” at a time, keep making progress.

Take action by starting the Kelsey Byers Challenge today!
